

Jumboflex SB

Jumboflex SB

250 mm

Approx. 70 mm

2.1 mm

Approx. 210/m²

Jumboflex SB improves lying comfort thanks to the tightly bonded springs on the sides and, thanks to its size and stability, is ideal for large-surface mattress concepts such as edge-to-edge or full-perimeter models.

The higher material content in the spring and the increased pressure during bonding ensure that the innerspring remains particularly dimensionally stable, thus saving work steps in further processing

With a height of 25 centimetres, Jumboflex is one of the highest innersprings in the world and impresses with its exceptional stability

Patented* edge reinforcement for optimum dimensional stability

*EP2123197 - Spring core with reinforced edges
